

Prompt looping

One prompt, the whole job.

THE CURRENT HABIT

One question at a time

Ask. Read. Ask again. Every turn, you decide what happens next — you are the one carrying the job between messages.

You: write me a headline

Claude: here are five options...

You: ok, now a tagline

Claude: sure — how about...

You: shorter

Claude: got it —

You: now do the next page

= MANUAL LABOR WITH EXTRA STEPS

THE TURN

You're not prompting.
You're typing.

Asking for help is a turn. Handing off work is a prompt with a finish line.

THE PATTERN

Anatomy of a loop

The finish line is written into the prompt — so the model never stops to ask.

LOOP 01

The Chain Loop

One prompt, numbered stages — each stage eats the previous stage's output.

01

CHAIN LOOP • WORKED EXAMPLE

Three inputs, one build

Industry: tattoo • City: Flint, MI • Service: custom work

PART 1 The website

One self-contained file. Real copy — no invented reviews.

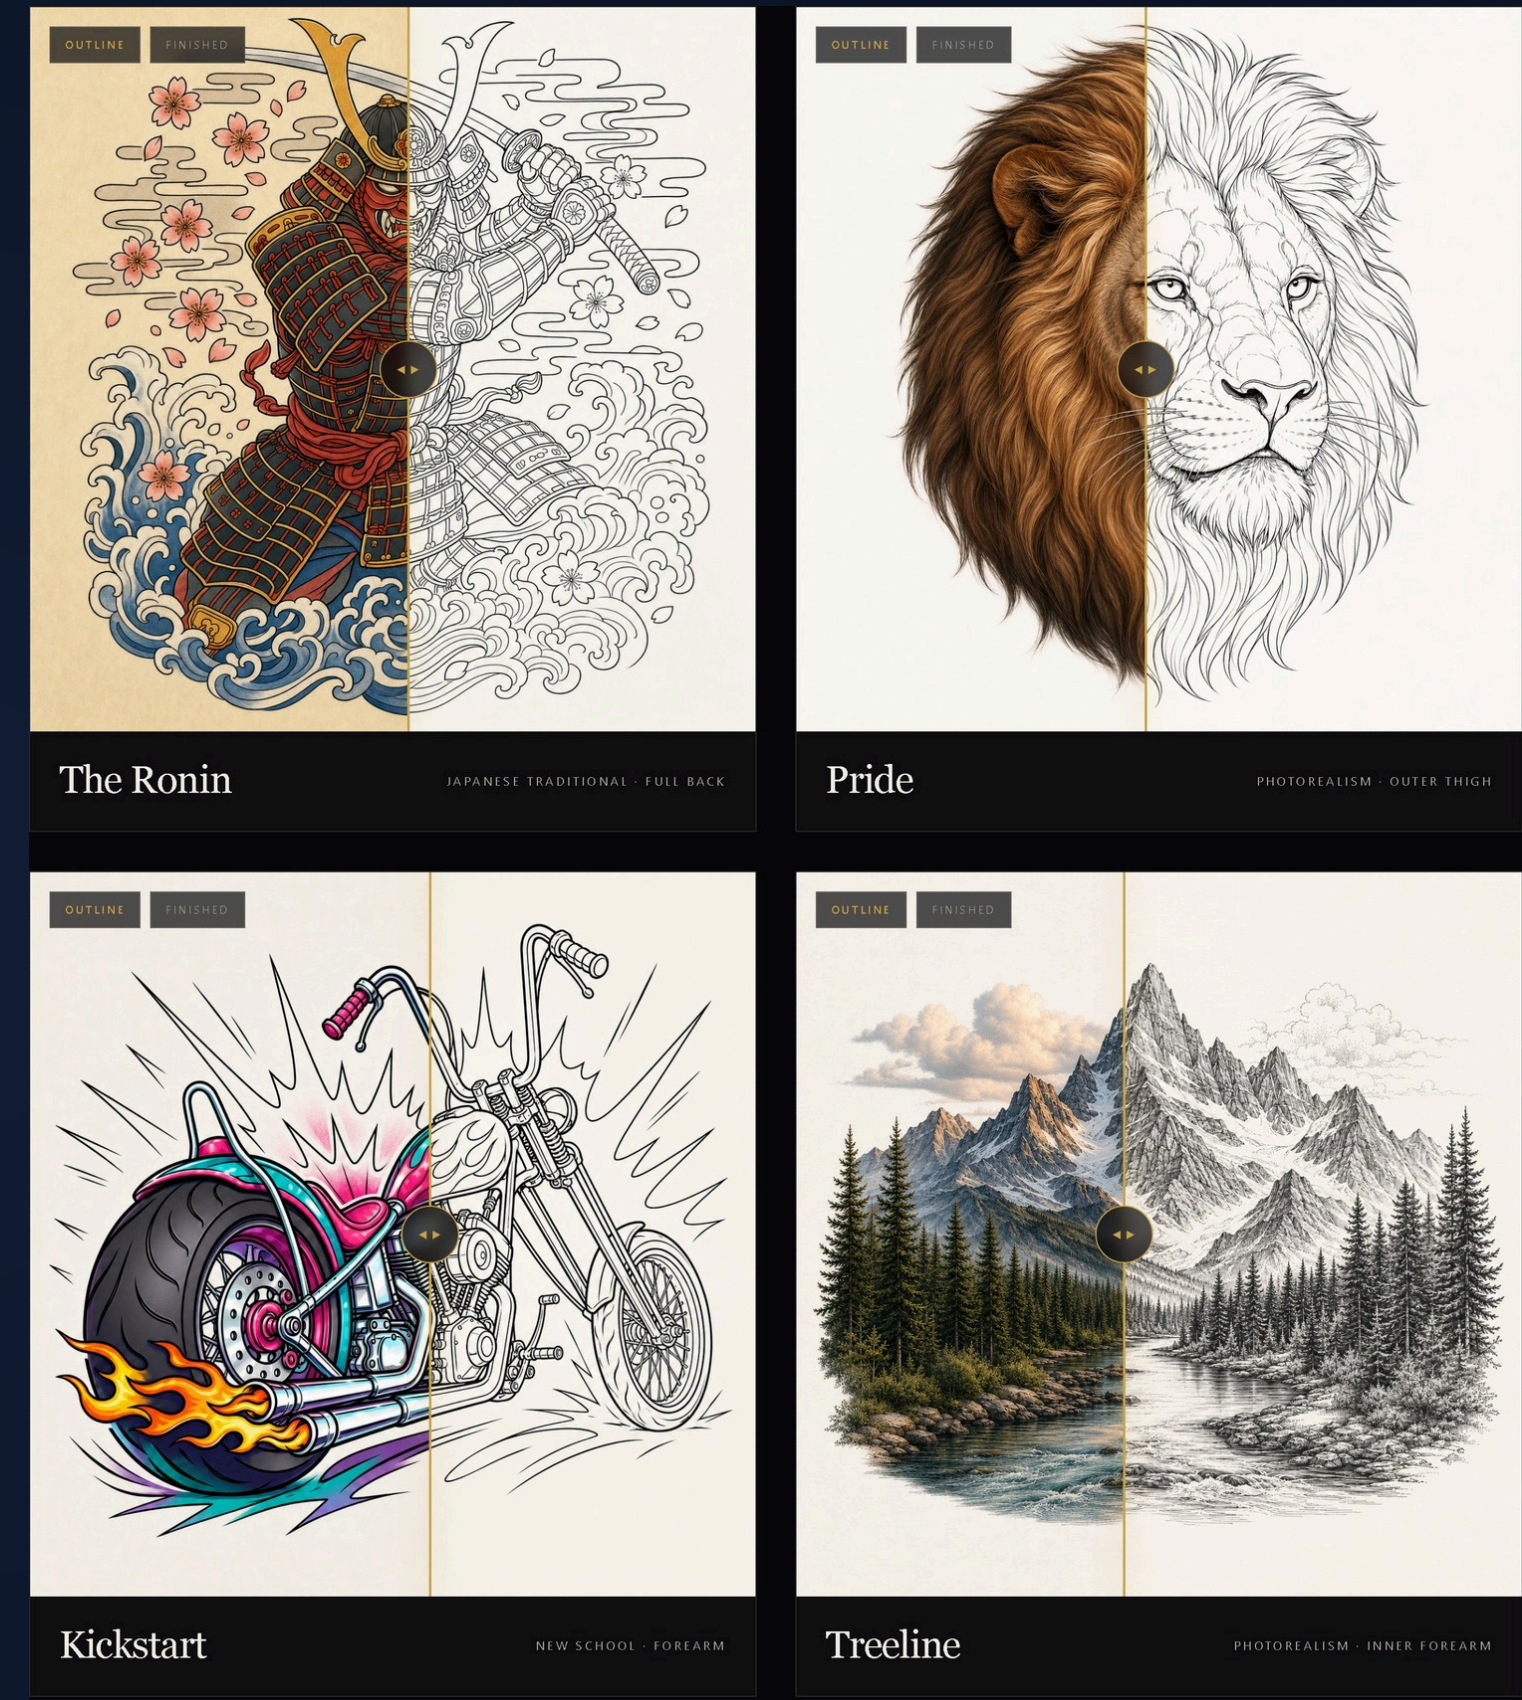

PART 2 The SEO plan

Long-tail local keywords, the competitive gap noted on each.

PART 3 The sales script

A spoken cold call that sells the site — \$900 flat.

Built from a phone. One prompt, no second message.

LIVE → kitfire.ai/toronto

The prompt itself

Do all THREE parts below, in order,

"You are my local-business web builder and growth partner. I'll give you three things – an industry, a city, and a service.

PART 1 – BUILD MY WEBSITE · one self-contained index.html · real copy, no lorem ipsum, no invented reviews

PART 2 – MY SEO PLAN · 8-10 long-tail local keywords + the gap for each

PART 3 – MY SALES SCRIPT · a spoken cold call selling that site for \$900 · no fake urgency · close on a day and time

MY THREE INPUTS → Industry: ___ · City: ___ · Service: ___"

- 1 Numbered parts.** Part 2 is written against Part 1's site; Part 3 against Part 2's gaps. Remove one and the next has nothing to stand on.
- 2 The finish line.** Stated up front – so it never stops at stage two to ask a question.
- 3 Guardrails once, at the top.** Real data only, no fake urgency – not renegotiated every turn.

LOOP 02

The Fan Loop

Same prompt, N targets. One shop becomes every shop in the county – only the input list changes.

The prompt is the product. The list is the volume.

02

The Critique Loop

Output goes back in against a bar you stated in advance — revised until it passes.

FIRST DRAFT OF THE COLD CALL

Opens as a salesperson · pitches features · ends with "let me know if you're interested"

→
vs. the bar

AFTER THE CRITIQUE PASS

Opens as a customer who couldn't book online · sells the car with features · closes on a specific

Almost nobody runs this pass. It's where the quality comes from.

03

EVERY LOOP, EVERY TIME

The four operator rules

01

Name the finish line

"Do all three parts and keep going until every part is finished."

02

Guardrail once, at the top

Stated in the prompt — not renegotiated every turn.

03

Forbid the stall

A prompt that can end in a question will end in a question.

04

No invented facts

Real, verifiable data only. Fabrication makes output unusable in a real business.

WHERE IT LANDS

The loop as an offer

- A complete site.
- The SEO plan behind it.
- A script to sell it — \$900 flat.

\$900 is the price on the offer — a price, not a promise of results.

The pitch slideshow — written by the same loop

YOU'VE HIT ALL THREE

Where loops fail

Stops halfway

Does stage one, then asks if you'd like it to continue. You already said yes — in the prompt you didn't write.

MISSING: the finish line

Invents a business

Five-star reviews from customers who don't exist. Output you can't use anywhere real.

MISSING: the fact rule

Volume, no quality

Forty mediocre things instead of four good ones. The fan ran; the critique never did.

MISSING: the critique pass

Your loop, tonight

FILL IN THE BLANKS

You are my **[role]**. Do all THREE parts below, in order, and **keep going until every part is finished**.

PART 1 – **[the raw work]**

PART 2 – **[built from Part 1's output]**

PART 3 – **[built from Part 2's output]**

RULES: real, verifiable data only · no questions back to me · finished means all parts done · then review it against **[your bar]** and revise until it passes.

MY INPUTS → **___ · ___ · ___**

Write one tonight.
